Summary

Full-stack developer building production-ready systems for real manufacturing workflows. I develop **MCP servers (Model Context Protocol)** that connect AI agents to Google Drive, Sheets, and enterprise data through typed tools. Built a QR equipment platform with water monitoring and AI consultant, a Modbus IoT microservice, and an HR system with a Telegram bot.

Core Skills

MCP / AI: Model Context Protocol, MCP SDK, stdio, Zod, tool calling, Claude / Gemini / DeepSeek
Frontend: React, TypeScript, Vite, Ant Design, Redux Toolkit, Recharts, responsive UI
Backend: Node.js, Express, REST API, SSE, JWT, middleware
Database: Supabase, PostgreSQL, Prisma, SQL migrations, RLS, TimescaleDB
Integrations: Google Drive/Sheets, GAS, Telegram Bot API, Modbus TCP, Docker, Railway, VPS/Nginx

Projects

MCP Server · Google Drive and Sheets

TypeScript · Node.js · MCP SDK · Zod · GAS · Cursor / Claude Desktop

MCP server bridging AI agents and production data. Wrapper over the GAS backend without duplicating business logic.

- MCP server on [@modelcontextprotocol/sdk](#) (stdio) for Cursor and Claude Desktop.
- Equipment tools: CRUD in Google Sheets, automatic Drive folder creation.
- Maintenance logs: read, create, and update service records.
- Drive: file search, document reading, uploads via Google APIs.

QR Equipment Identification Platform

React · TypeScript · Node.js · Express · Supabase · MCP · Railway

Full-stack platform: equipment identification, maintenance logs, documents, water monitoring, AI diagnostics.

- QR cards with maintenance history, documentation links, and photo attachments.
- React/TypeScript UI: dashboards, archives, forms, charts, mobile-friendly layout.
- AI consultant on Node.js/Express: streaming, tool calling, multi-provider AI support.
- Water monitoring with archives and meter replacement anomaly correction.
- **Demo:** [qr-code-for-equipment-identification-production.up.railway.app](#) · login credentials on request: serhiosidorovich@gmail.com

osmos-modbus-service · reverse osmosis monitoring

Node.js · TypeScript · Modbus TCP · React · TimescaleDB · Docker · VPS

Modbus TCP polling microservice for a reverse osmosis plant (Weintek HMI). Part of the water and equipment ecosystem.

- Modbus TCP poller with block register/coil reads, REST API, health ok/degraded/down.
- React dashboard: SVG HMI, React Flow, parameter table, Recharts charts.
- TimescaleDB hypertables, compression, continuous aggregates; Docker Compose + Nginx.

Siarhei Sidarovich

FULL-STACK DEVELOPER

Employees · employee and PPE tracking

[React](#) · [TypeScript](#) · [Ant Design](#) · [Prisma](#) · [PostgreSQL](#) · [Telegram](#) · [Railway](#)

Internal HR system: web app, Telegram bot, PPE issuance, replacement deadline tracking.

- Telegram bot: employees, issued PPE, and deadlines via Express/Prisma API.
- Employee registry, PPE tracking (issued / returned / written off), issuance norms.
- Personal card export to PDF and Excel; JWT, Prisma, Railway deployment.
- **GitHub:** github.com/Serhio348/Employees · demo on request
